

Canadian Springs offers the environmentally responsible way to enjoy great tasting water.

Canadian Springs has always been committed to environmental responsibility at all levels of our business from water collection, transportation, packaging, distribution and reverse distribution of used packaging.

Refresh. Refill. Repeat.

Canadian Springs natural spring and demineralized water comes in large, reusable containers. We delivery and pick up our bottles so there's very little chance of them ending up in a landfill like the estimated 75-80% of single serve bottles as reported by the Container Recycling Institute. (<http://www.container-recycling.org/>).

- Each 18.5L container is used an average of 55 times, carrying 1,000L of water in its lifetime. Equal to 2,000 single-use 500ml bottles
- Canadian Springs/Eau Labrador controls the life cycle of our refillable bottles by issuing a \$10 refundable deposit on each one.
- We get back 99.8% of our bottles – a world class return rate!
- All our “retired” bottles are ground up and recycled for use in the manufacturing of other plastic products.
- Our process results in a low carbon footprint.

Fewer packaging materials, less waste.

In comparison to most single use 500ml bottles...

- Our returnable, refillable 18.5L and 11L water bottles have a 94.4% lower GHG (green house gasses) life cycle footprint.
- We use 96.2% less energy for all aspects of our container material extraction for production, and bottle washing and bottle distribution.
- We use only 0.025% of the packaging material

Transported less distance for less impact.

Canadian Springs takes consistent measures to ensure our water gets to you in an efficient and environmentally sensible way.

- All returnable, refillable bottles are transported short distances, and returned in the same trucks, from and to their local area distribution centres.
- A typical downtown Canadian Springs/Eau Labrador water truck travels just a total of 15,000km/year while completing 15,000 deliveries, averaging five (5) bottles each.
- Hybrid Trucks - Canadian Springs is one of a handful of private companies in Canada to acquire seven hybrid delivery trucks. Partial funding for the purchase of these hybrid trucks was generously provided by the Fraser Basin Council. These hybrids can reduce traditional truck emissions by an estimated 37%.
